Waist to hip measurements can be an *Indicator of Health*.

Belly fat is a good predictor of poor health. The more belly fat you have, the greater *potential and risk for Dis-ease* in the body.

Belly fat creates systemic inflammation, which affects the entire body!

Waist measurement in inches:

```
Males should be less than 32 inches (very
good)
32–34 (good)
35–37 (OK)
37.1–39.9 (beginning of ill health)
40+ (the beginning of the YET's)
```

```
Females should be less than 29 inches (very
good)
29 to 31 inches (good)
31–32.5 inches (OK)
32.6 to 34.9 (beginning of ill health)
35+ (the beginning of the YET's)
```

Measure the Waist and then measure the Hips Divide the waist circumference by your hip circumference to determine (WHR) Waist to Hip Ratio

| Women | Men |
|----------------|------------------------------|
| 0.80 or lower | 0.95 or lower |
| 0.81 - 0.85 | 0.96 - 1.0 |
| 0.86 or higher | 1.0 or higher |
| | 0.80 or lower 0.81 – 0.85 |
